

PROJET PORTFOLIO

COMBRISSEON Lucie

Part I : Brief

My "Portfolio" application consists of a front office and a back office. It will be realized using Laravel. Data management will be done using Mysql.

The **front office** will contain five pages. Each page will contain a **navigation bar**, with the access to the various pages and a logo, and a **footer** with my pseudonym, the year and the legal notice.

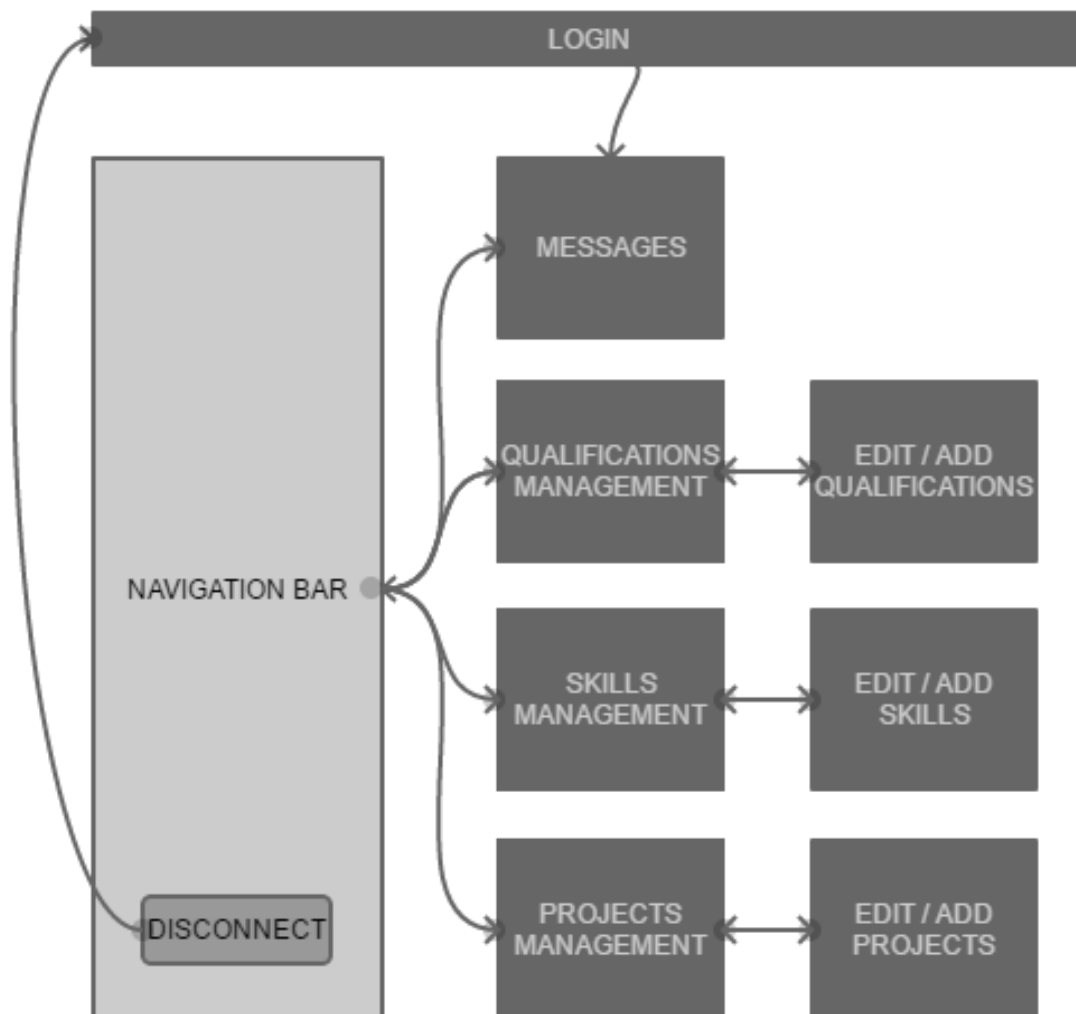

The first view is an "**about**" page with a left part including an avatar as well as links to social networks. The right part will be a small description of who I am.

The second view is a "**skill**" page which will also have a left part containing my school curriculum (qualifications). The right side will contain the skills (languages, software, etc.) taught in training and categorized. Each section is managed by a call to the database for the corresponding table.

The third view is the page containing my **portfolio** with a slider, automatic scrolling, presenting the main realized projects. The slider will include a representative screenshot of the project, a title, as well as a short description with the technologies used as needed.

The fourth view is the one for the **contact** with a form that will contain the main information to identify the correspondent and his message.

And the last view is for the **legal notice**.

The **back office**, meanwhile, will be organized in eight pages. All administration pages will be organized around a **menu on the left side** to move from one page to the other, and with a logout button.

A first view for the **connection** to the administration.

The second view is for **reading the messages of contact** which will be sent to me and which will be stored in a database. I will be able to delete a received message.

The views three to eight are for **managing information** in the database, which are respectively for **qualifications**, **skills** and **project's slider**. It will be possible for each page to add, modify or delete data. To edit or add information each section will create a view with fields to edit or fill in.

Part II : Wireframe

Annex A.

Part III : MCD

Annex B.

Part IV : Features

My portfolio application will allow the user to view different pages. The transition from one to the other will be via a **link on the navigation bar**.

Furthermore, the user will be able to **send a message** via a **contact form**. Four fields will be required and mandatory. Sending will be done after a **click on the send button**.

The administrator can connect to the administration interface through a **login form**. For this, two fields must be completed. The **verification** of the connection information will be done after a **click on the validation button**. If the information is incorrect, an error message will be displayed on the current page. Otherwise the administrator will be redirected automatically to the page of management of the received messages.

A menu on the side allows to go from one section to the other. It contains a **disconnect button** that we refer to the login page.

It will be possible to view the messages, displayed from the most recent to the oldest. It will also be possible to **delete** a message. For this action, it will be asked to **confirm the delete action**.

Data management for qualifications, skills and projects will be the same.

A page will summarize the information present in the database. It will be possible to **delete** an entry via a delete button. A message will come to ask to confirm the action.

It will also be possible to add an entry via the **add button**. And it will also be possible to edit an entry via an **edit button**.

These last two actions will return on a page where it will be possible to modify or fill in the fields. By **clicking on the validate button**, we will be returned to the category summary page.
